

## WD PLANETS FROM GAIA

R. Silvotti, A. Sozzetti, M. Lattanzi

*INAF-Osservatorio Astronomico di Torino*

We investigate the potential of high-precision astrometry with Gaia for detection of giant planetary companions to nearby white dwarfs. Considering that, up to now, no confirmed planets around single white dwarfs are known, the results from GAIA will be very important to study the late-stage evolution of planetary systems and to verify the possibility that 2nd-generation planets are formed.
